

Relay Judging Platform (RJPLD-2016/RJPD-2016) Mounting Instructions

Thank you for purchasing a relay judging platform (RJPLD-2016/RJPD-2016) for use with OSB11 and OSB12 starting blocks. This instruction sheet describes how to put your RJP on your starting block.

1. There are four strap assemblies attached to the RJP: two at the front and two at the back. Place the RJP on the starting platform with the front of the RJP (the part with the bend) hanging over the front end of the block, and the straps extended.
2. Slide the clear plastic threader through the opening between the block surface and the footrest, and then pull the flat hook buckle and strap through. Repeat with the other threader and flat hook buckle.

3. Adjust the fastener on the strap coming from the front of the RJP to allow the straps to connect underneath the block. Hook the loop of the strap from the front of the block onto the flat buckle, as shown. Repeat for the other flat buckle.

4. Pull on the straps toward the front of the block that are connected to the center buckle to tighten both strap assemblies.
5. Flip the center buckles to secure the RJP in place. It is normal for the clear plastic threader to dangle out of the way under the block.
