

System 6 Online Updates

Keeping your System 6 updated with the latest versions of your software, taking advantage of the newest features, and loading additional software that you purchase is quick and easy.

- 1) Turn on your System 6, and check the version of Sport Loader by pressing the Diagnostics soft key.
 - a. If your timer is at Sport Loader Version 1.104 or later, proceed to step 2 now.
 - b. If your timer's Sport Loader version is earlier than 1.104, you must first update Sport Loader using a 3.5-inch floppy disk. From a computer with Internet access, go to the customer service section of our website, www.coloradotime.com. Follow the instructions for downloading the latest version of Sport Loader and a desktop image for your System 6 to a 3.5-inch floppy disk.
 - c. Follow the instructions on the website for installing these two items on your System 6.
- 2) With Sport Loader 1.104 and later, the System 6 can be directly connected to the Internet through its Ethernet port for updates.

You will need:

- System 6
 - Network connection to the Internet
 - Network cable to connect the two (RJ45 – it looks like a slightly larger version of a telephone connection)
- 3) Simply connect your System 6 to the Internet via its Ethernet port, and follow the steps below.
 - a. On the right side of the System 6 display, press the “Network” soft key. You may have to press the “More” soft key to see the “Network” soft key.
 - b. Press the “Obtain Dynamic I/P” soft key. This will temporarily obtain an IP address from your network.
 - c. Verify that the connection is working. Press the “More” soft key, and then press the “Test Connection” soft key. The machine should reply with a message in the lower left corner saying, “The connection is good!” If, instead, it says, “A connection cannot be made!” contact your computer system administrator. (*Note:* This procedure describes a DHCP-enabled network. The system administrator can program the network configuration values in manually if necessary.)
 - d. Press the QUIT key to exit the Network menu.

- e. Press the “Install” soft key, then press the “Install from Server” soft key. You may need to press the “More” soft key to see the “Install from Server” soft key. The System 6 will now check for the most recent version of all the software you have purchased for this unit and update your System 6 as necessary.
- f. Once the software is loaded, you will see a message on the screen indicating that you have the software for all the sports you have purchased is up to date.
- g. Press the Quit key to return to the main menu.
